ERD■ ■Wireframes. ■■■■■ ■■■■■ ■■ ■■■■■ ■■■■■■■ (Fees) ■■■■ ■■■■ — ■■ ■■■
Schema ■■■ Logic ■■■■■■■.

1. What Changed & Why

What changed? The fee structure for the new system (2024 / 2025). The fee structure for the old system (fees) was based on the number of transactions. The new system (fees) is based on the number of transactions and the value of the transactions. The new system (fees) is based on the number of transactions and the value of the transactions.

Transaction Type	Fee	Transaction Type	Fee
Debit / Credit	1.5% — 2.5%	Debit / Credit (with interest)	% of the amount
Transfer	1.75% of the amount	Transfer	% of the amount
Payment	0% — 0.5%	Payment	% of the amount
Valu / Symp	2% — 5%	Valu / Symp	% of the amount
Interest	Interest	Interest	Interest
Other	0%	Other	—

Example: A fee of 2% on a transaction of 1000. The fee is 20. The total amount is 1020. The fee is 20. The total amount is 1020.

Columns: payment_type (VARCHAR) and payment_method_id (FK).
The fee column represents the amount of the fee. The record is created when the payment is successful.
The fee is calculated based on the payment method and the amount.

2.3 Table: payment_fee_expenses —

This table stores the fee information for each payment record. The fee is calculated based on the payment method and the amount.

payment_fee_expenses —			
Column	Type	Constraints	Comments
id	UUID	PK	
invoice_id	UUID	FK→invoices	
payment_method_id	UUID	FK→payment_methods	
fee_amount	DECIMAL(15,4)	NOT NULL	
branch_id	UUID	FK→branches	
created_at	TIMESTAMPTZ	DEFAULT NOW()	

The fee_bearer column represents the entity that is responsible for paying the fee. It can be either the merchant or the customer. The fee is calculated based on the payment method and the amount.
